(54) Title: FAIL SAFE SWITCH FOR COMPUTER SYSTEMS

(57) Abstract: In order to prevent accidental de-
pression of a front panel power switch (12') or front
panel reset switch (14') of a computer system (100),
a novel circuit utilizing an additional safety switch
(102'), the Safe-Lock switch, is proposed that pro-
vides a simple but effective way of preventing ac-
cidental switch closures without adding significant
cost or complexity to the original switch functions.
